

SENDSMSNIGERIA.COM API

Messages are sent with the HTTP GET or POST protocol. This allows SMS messages to be sent, by passing parameters directly as query string variables.

URL for Sending Messages

<http://www.sendsmsnigeria.com/api/>

Table 1 - Query string parameters

Parameters	Description	Required	Example
email	Your SendSMSNigeria.com email address.	Yes	test@test.com
password	The password you use to login with SendSMSNigeria.com	Yes	
numbers	Telephone numbers that will receive your message. Multiple numbers must be separated with commas.	Yes	2348067751830
message	The message to be sent. If the message is more than 160 characters, it will be sent in batches with extra cost.	Yes	Hello world
sender	This is the sender id.	Yes	John

Examples

[http://www.sendsmsnigeria.com/api/?email=test@test.com&password=test&sender=John&message=love you&numbers=2348067751830](http://www.sendsmsnigeria.com/api/?email=test@test.com&password=test&sender=John&message=love%20you&numbers=2348067751830)

Server Responses

Upon message submission, SendSMSNigeria's server platform will provide the user with a corresponding response value for each message. All responses are in plain text. A response value greater than zero (0) indicates successful message.

Table 2 - Return Values

Value	Description
-1	Missing telephone number(s)
-2	Missing message
-3	Missing email address
-4	Missing password
-5	Wrong email or password
-6	Not enough credit
-7	Error message not sent
>0	Successful.
